Interfacial

Interfacial rheology is a branch of rheology that studies the flow of matter at the interface between a gas and a liquid or at the interface between two immiscible liquids. The measurement is done while having surfactants, nanoparticles or other surface active

Read Book

Interfacial

compounds present at the interface. Unlike in bulk rheology, the deformation of the bulk phase is not of interest in interfacial rheology and its effect is aimed to be minimized. Instead, the flow of the surface active compounds is of inte

~~Butterworth~~

Just as rheology is the study of flow in bulk fluids, interfacial rheology is the study of the flow properties of liquid interfaces.

These flow properties are important for many products and
